PRODUCT

## Industrial Drip Kits

Roof drip kits can be a permanent or temporary fix to keep leaks and drips away from people, expensive equipment and inventory.

Our pipe kits channel liquid from burst, cracked or condensing pipes into floor drains or a collection drum.

All kits are manufactured utilizing 10 oz. coated vinyl with fire, UV and mildew resistant properties. Corner grommets and high strength rubber straps ensure easy deployment while the valve and hose fitting connect to a standard hose.

## Keep your facility, equipment and stock dry.

*All kits come complete with grommets and valve, hose fitting and four 9" rubber straps.*
