PRE-ORDERS BEGIN JUNE 1ST, 2022

ADJUSTABLE LIFTING STRAP

The quality adjustable strap allows you to carry the Nexjet comfortably thanks to its foam padding.

DUAL-TANKS

The clean water and soap tanks allow you to easily alternate between the two. No need to premix everything. We have also integrated filters to prevent contaminants from getting into the tanks.

MOLDED HANDLE

The handle is molded directly onto the tank and allows for one-handed carrying.

SOLID AND DURABLE BASE

The base is built to last with inserts built into the plastic during molding.

STORAGE

We also made room to easily store hose, gun and tips.

14AH LITHIUM BATTERY

We opted for a lithium battery rather than an acid battery. At only 3.1 lbs, it is 2.5x lighter. Moreover, it is easily accessible and rechargeable. The charger is included.

20' COIL HOSE

We designed a new generation hose that supplies water, soap and electricity to the gun.

INTEGRATED INSPECTION LIGHT

We have integrated an inspection light on the front of the gun. Automatically activated when you apply a light pressure on the trigger.

HIGH-QUALITY VALVE

Designed by our team and manufactured in Quebec to ensure incomparable quality and durability.

NEXT GENERATION GUN

The gun was also entirely designed by our team, with one thing in mind: making your job easier. Hang it easily on you or on the machine with its interchangeable hook.

150 PSI

INDUSTRIAL GRADE INTERNAL COMPONENTS

Includes 2 cleaning nozzles (15° and 0°)

SOAP CONTROL EASY AND ACCESSIBLE

Directly on the gun, you can activate/deactivate the illuminated button with your thumb. Switching between soap and clean water has never been so easy.

NEXT GENERATION COIL CLEANING SYSTEM

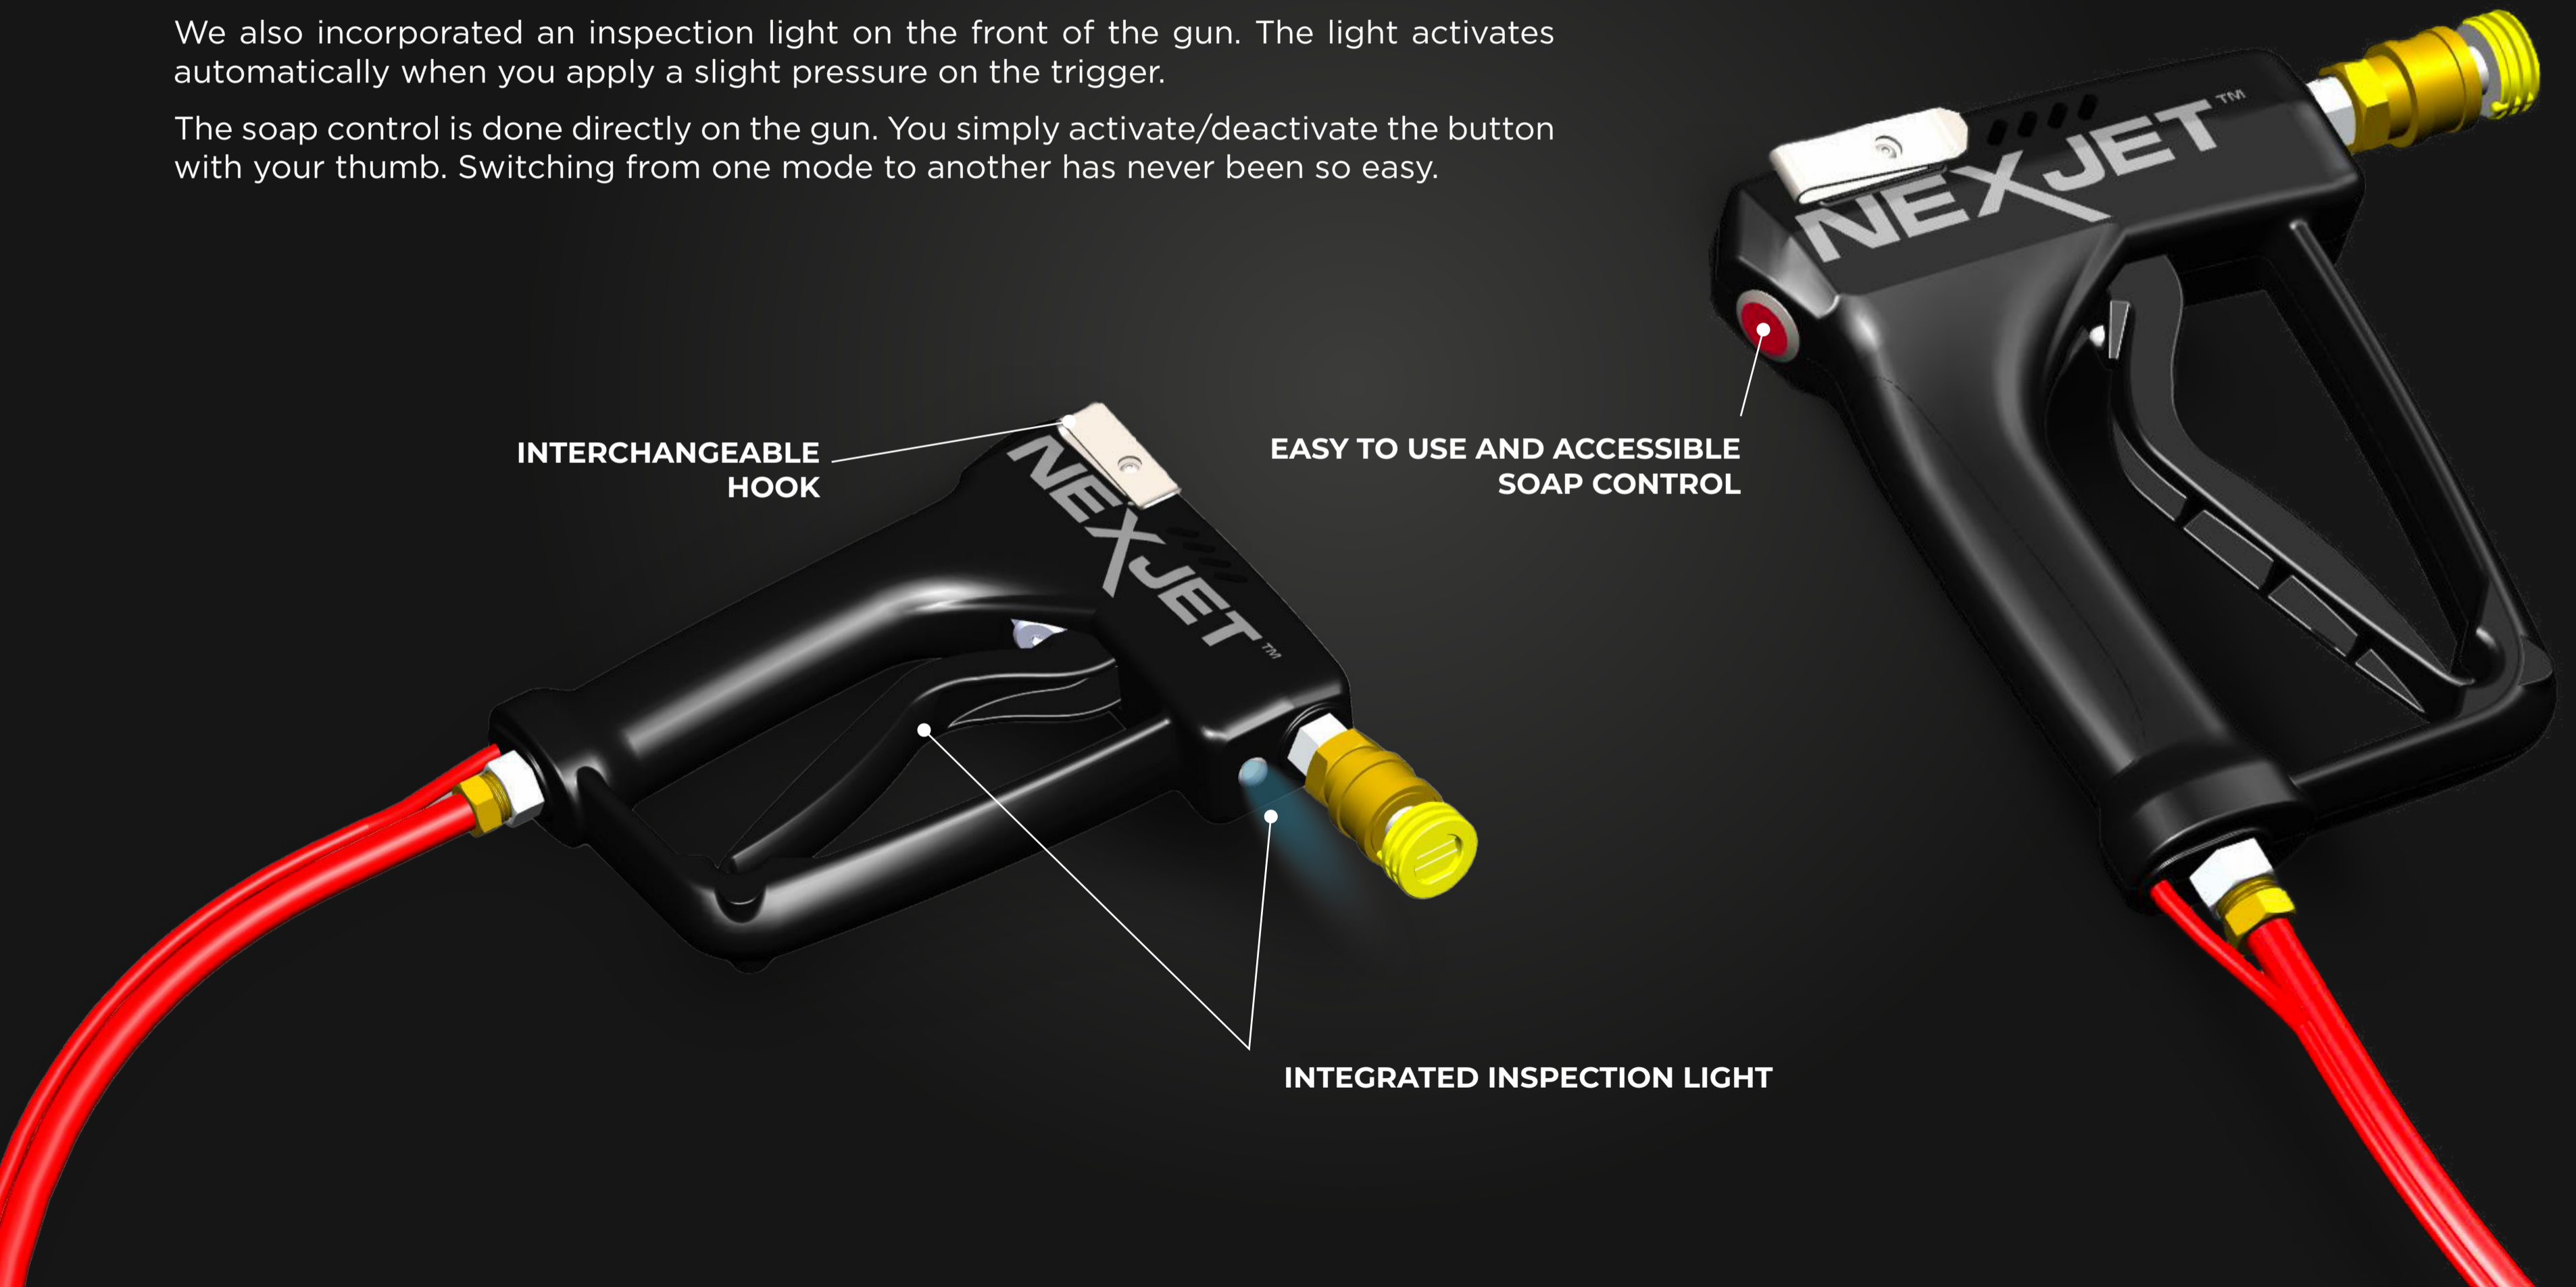

GUN NEXT GENERATION

The Nexjet™ gun was designed entirely by our team with one thing in mind: making your job easier. Easily hang it on you or the machine with its interchangeable hook.

We also incorporated an inspection light on the front of the gun. The light activates automatically when you apply a slight pressure on the trigger.

The soap control is done directly on the gun. You simply activate/deactivate the button with your thumb. Switching from one mode to another has never been so easy.
