

Matterport for Insurance Restoration

Discover Matterport's digital twin technology—the comprehensive way to streamline your restoration and claims processes by helping you save time, cut costs, and complete jobs faster.

The Matterport Advantage

Digital twins provide accurate, easy-to-use documentation that can serve as a single source of truth, reducing potential disputes and enabling more rapid claims approvals from insurance carriers.

Sketch

Eliminate hours of manual measuring and sketching properties with our turnkey TruePlan® service. With one click of a button, you can generate an accurate sketch, speed up the estimate process by an average of four times, and shorten the insurance claims cycle.

Estimate

Enable remote estimation to reduce travel time, increase efficiency, and reduce estimation times with thorough and accurate digital twin documentation. With remote estimation, insurance estimators can produce estimates in times of emergency when they can't physically be at the property due to safety risks.

Collaborate

Sharing 3D models with adjusters, insurance carriers, and policyholders to process claims and resolve questions from a single source of truth increases transparency, accuracy, and efficiency. Save time by eliminating the need for ad hoc photo requests and manual measuring due to incomplete information with a complete digital twin of every loss.

Experience

By capturing a digital twin of a claim at the onset, you can refute false breakage claims and improve the quality of your team's repairs. With remote site management and more effective work-in-process meetings, improving the quality of repairs and increasing customer satisfaction go hand in hand.

Impress property managers, insurance agents, and adjusters with photo-realistic 3D documentation. Nothing sells your business better than the gold standard of accuracy in claims.

With Matterport, there is no longer a need for hundreds of photographs, manual measurements, repeat site visits, and written statements.

- Reduce site visits by up to 40 percent.
- Generate estimates 50 percent faster.
- Reduce carrier claims settlement time by up to 37 percent.
- Produce property sketches up to 75 percent faster with Matterport TruePlan® for Xactimate®.

With centralized estimating and digital twins of property losses, we are cutting the time from when the information is available to when the estimate is sent to the approving party in half.

Eric Blaser, Vice President of Estimating at Paul Davis
